SAMBUTAN

MENTERI KESEHATAN REPUBLIK INDONESIA

Upaya perbaikan gizi dapat dilakukan dengan memperbaiki pola konsumsi pangan masyarakat. Salah satu instrumen yang diperlukan sebagai dasar perencanaan pangan dan evaluasi konsumsi pangan serta asupan gizi yaitu Data Komposisi Pangan yang dapat memberikan informasi kandungan zat gizi pangan dari berbagai daerah di Indonesia. Data Komposisi Pangan ini dapat digunakan baik oleh akademisi, organisasi profesi, nutrisionis, masyarakat umum maupun bagi pemegang kebijakan.

Data Komposisi Pangan terstandar dan dapat mewakili data nasional yang lengkap dan akurat sangat diperlukan, agar masyarakat memiliki cukup informasi dalam memilih dan mengkombinasikan pangan sehat menurut kandungan gizinya.

Mengingat beragamnya pangan di Indonesia, data komposisi pangan perlu terus dilengkapi secara terintegrasi melibatkan berbagai sektor terkait. Untuk itu diharapkan peran serta berbagai balai penelitian dari lintas sektor/lembaga, perguruan tinggi dan Poltekkes di berbagai daerah dalam melakukan analisis zat gizi berbagai bahan pangan. Demikian pula untuk kandungan gizi pangan olahan industri, peran BPOM sangat penting, karena perubahan gaya hidup menyebabkan perubahan pola konsumsi masyarakat dari makanan alami menjadi makanan jadi/olahan.

Saya sampaikan ucapan selamat dan penghargaan yang tinggi kepada PERSAGI dan semua pihak yang terlibat dalam pembaruan buku ini. Kontribusi Bapak/Ibu sangat berarti dalam mendukung upaya perbaikan status gizi masyarakat dan percepatan pembangunan nasional bidang kesehatan selanjutnya.

KATA PENGANTAR

Puji syukur kehadirat Tuhan YME, pada akhirnya Tabel Komposisi Pangan Indonesia (TKPI, 2009) dapat diperbarui. Pembaruan perlu dilakukan karena masih ada nilai gizi yang belum lengkap pada beberapa bahan makanan yang ada. Salah satu syarat Tabel Komposisi Pangan yang baik adalah memiliki nilai gizi secara lengkap, sehingga pada saat digunakan untuk mengetahui asupan zat gizi individu atau kelompok hasilnya akurat. Selain itu, TKPI sangat dibutuhkan oleh sektor pertanian dalam kegiatan ketahanan pangan, institusi rumah sakit ataupun klinik, dalam penetapan diet pasien, sektor industri dalam penetapan label makanan, dan sektor penelitian gizi dan kesehatan, dalam membantu memberi masukan kepada pemerintah terkait kebijakan gizi dan kesehatan.

Proses pembaruan ini melengkapi nilai gizi yang belum ada pada TKPI 2009 dengan menggunakan metode *imputed* dan *borrowed values* untuk makanan tunggal/single, serta melakukan pengkodean dengan membedakan makanan non-olahan dan olahan. Pembaruan TKPI harus terus berlanjut dengan melengkapi nilai gizi makanan komposit termasuk makanan pabrikan, serta menambah bahan makanan baru beserta nilai gizinya. Diketahui bahwa jenis makanan yang ada di Indonesia semakin beragam dan berubah-ubah, seperti masuknya buah impor, makanan pabrikan yang terus berkembang jenisnya. Nilai gizi dari hasil analisis laboratorium merupakan metode terbaik untuk pembaruan TKPI.

Dalam kegiatan pembaruan TKPI ini, apresiasi diberikan kepada PERSAGI dan Tim Penyusun TKPI 2009 serta semua pihak yang telah memberikan kontribusi teknis dalam proses pembaruan TKPI yaitu DR Abas Basuni Jahari, Pusat Penelitian dan Pengembangan Upaya Kesehatan Masyarakat-Balitbangkes, Pusat Penelitian dan Pengembangan Biomedis dan Teknologi Dasar Kesehatan-Balitbangkes, Poltekkes Jakarta II, Lembaga Ilmu Pengetahuan Indonesia (LIPI), Badan Tenaga Atom Nasional (BATAN).

Ucapan terima kasih tidak lupa diberikan kepada FEMA-IPB dan *Global Alliance for Improved Nutrition* (GAIN), atas saran dan masukan dalam pelaksanaan kegiatan pembaruan TKPI ini.

Semoga TKPI hasil pembaruan ini dapat bermanfaat dan pembaruan dapat terus dilakukan. Kritik dan saran membangun untuk penyempurnaan buku ini sangat diharapkan.

1. PENJELASAN UMUM

TABEL KOMPOSISI PANGAN INDONESIA

Data pada Tabel Komposisi Pangan Indonesia (2017) merupakan pengembangan dari Tabel Komposisi Pangan Indonesia (TKPI) tahun 2009. Upaya pengembangan data dilakukan dengan cara imputasi nilai gizi yang belum memiliki nilai atau masih kosong, dengan menggunakan *imputed values* dan *borrowed values*. Selain itu pada buku TKPI ini, ada penambahan bahan pangan baru yang bersumber dari data Badan Ketahanan Pangan, Kementerian Pertanian.

Proses imputasi nilai gizi pada TKPI (2009) yang dilakukan saat ini hanya untuk bahan pangan tunggal/*single* yang umumnya adalah bahan pangan mentah, sedangkan pangan komposit termasuk pangan pabrikan saat ini belum dapat dilakukan. Imputasi nilai gizi untuk Tabel Komposisi Pangan sebaiknya dilakukan seminimal mungkin. Selanjutnya proses pengembangan Tabel Komposisi Pangan Indonesia akan terus dilakukan, terutama dengan menggunakan nilai analisis laboratorium.

Tabel Komposisi Pangan Indonesia (2009), yang digunakan sebagai dasar TKPI (2017), merupakan kumpulan data komposisi zat gizi pangan yang ada di Indonesia, yang berasal dari laporan atau makalah hasil penelitian mengenai komposisi zat gizi pangan yang dilakukan di Pusat Penelitian dan Pengembangan Gizi dan Pangan, Departemen Kesehatan RI dan sumber lain, yaitu;

1. Lie Goan Hong dan Oey Kam Nio, 1964. Daftar Analisis Bahan Pangan. Lembaga Makanan Rakyat. Jakarta.

2. SISTEMATIKA TABEL KOMPOSISI PANGAN INDONESIA

2.1. Jenis dan Pengelompokan Pangan

Jenis Pangan yang ada pada Tabel Komposisi Pangan ini, meliputi pangan tunggal/single dan olahan, yaitu:

- a. Pangan tunggal/single pada TKPI ini adalah bahan pangan yang tidak mengalami pengolahan dan tidak memiliki campuran bahan pangan lainnya (termasuk garam dan minyak), bisanya dalam bentuk mentah atau segar atau masih dalam bentuk alaminya
- b. Pangan olahan pada TKPI ini adalah bahan pangan yang telah mengalami proses pengolahan sehingga merubah bentuk alami bahan pangan. Bahan pangan olahan tersebut dapat berupa bahan pangan single/tunggal yang telah mengalami pengolahan atau pangan komposit/campuran. Contoh bahan pangan tunggal terolah adalah tepung terigu dan tepung beras. Pangan komposit/campuran contohnya adalah masakan, kue-kue, dan pangan pabrikan.

2.2. Pengelompokan Pangan

Pengelompokan Pangan pada TKPI ini merujuk pada pengelompokan pangan yang dilakukan oleh Harmonisasi ASEAN. Pengelompokan pangan berdasarkan jenis, karakteristik, bagian, dan fungsi pangan (table 1).

TABEL 1. PENGELOMPOKAN PANGAN

| NO | BAHAN PANGAN |
|----|---|
| 1 | Serealia dan hasil olahnya |
| 2 | Umbi berpati dan hasil olahnya |
| 3 | Kacang, biji, <i>bean</i> dan hasil olahnya |
| 4 | Sayuran dan hasil olahnya |
| 5 | Buah dan hasil olahnya |
| 6 | Daging, unggas, dan hasil olahnya |
| 7 | Ikan, kerang, udang, dan hasil olahnya |
| 8 | Telur dan hasil olahnya |
| 9 | Susu dan hasil olahnya |
| 10 | Lemak dan minyak |
| 11 | Gula, sirup, konfeksioneri |
| 12 | Bumbu |
| 13 | Minuman |

2.3. Sistematika Penamaan Pangan

Pada TKPI ini, penamaan pangan yang dicantumkan menggambarkan deskripsi bahan pangan antara lain adalah;

- Warna: kuning, merah, ungu, putih, dll
- Proses pengolahan: panggang, goreng, bakar, dll
- Kondisi: mentah, segar,
- Bentuk: kering, bubuk, cair, dll

Sistematika penamaan yang dilakukan adalah nama, jenis, bagian, warna, pengolahan, bentuk. Contoh, jagung kuning bakar dan jagung putih rebus. Penamaan pangan yang tercantum adalah nama dalam bahasa Indonesia/lokal. Nama dalam bahasa Inggris dan taksonomi (ilmiah) dicantumkan pada bagian indeks. Penamaan ilmuah dilakukan oleh staf Lembaga Ilmu Pengetahuan Indonesia (LIPI) Departemen Biologi. Namun demikian ada kelemahan untuk pemberian nama taksonomi, karena dalam menentukan nama taksonomi diperlukan identifikasi berdasarkan sampel atau foto bahan pangan. yang dalam hal ini tidak tersedia.

2.4. Sistematika Pengkodean Pangan

Sistem pengkodean berdasarkan abjad yang diikuti numerik dan mengacu pada sistem kode yang dilakukan oleh Harmonisasi ASEAN yang di modifikasi. Alfabet yang digunakan menggambarkan kelompok bahan pangan dan pembeda perlakuan terhadap bahan pangan (mentah/segar atau olahan/proses). Numerik (tiga digit) setelah alphabet digunakan untuk urutan bahan pangan pada masing-masing kelompok. Alfabet I, L, dan O tidak digunakan pada kode kelompok bahan pangan (Tabel 2).

TABEL 2. SISTEM PENGKODEAN BAHAN PANGAN

2.5. Sistematika Penulisan Zat Gizi/Komponen Pangan

Sistematika penulisan zat gizi berhubungan dengan *INFOODS Tagnames* dan mencantumkan kadar zat gizi per-seratus gram bagian pangan yang dapat dimakan (BDD). Pencantuman zat gizi tersebut disajikan dalam tabel 3 sebagai berikut:

*) Pada TKPI ini, data serat yang ada adalah data serat total dan serat pangan, namun masih belum dapat diketahui dengan pasti bahan pangan yang mencantumkan serat total atau serat pangan.

2.6. Nilai Gizi Pangan

Nilai zat gizi yang tercantum pada Tabel Komposisi Pangan (2017) ini, merupakan nilai:

- a. *Analytical value* adalah nilai yang diperoleh dari analisis laboratorium.

Pada TKPI ini, metode analisis zat gizi yang digunakan dapat dilihat pada tabel 4 berikut ini:

TABEL 4. METODE ANALISIS ZAT GIZI

| No | KOMPONEN PANGAN | METODE ANALISIS |
|----|-----------------|---------------------------------------|
| 1 | Air | Pengeringan dalam oven dan gravimetri |
| 2 | Protein | Kjeldahl |

| 16 | Thiamin | Spektrofotometri |
| 17 | Riboflavin | Mikrobiologi |
| 18 | Niasin | Spetrofotometri |
| 19 | Vitamin C | Titrasi |

- b. *Imputated value* adalah nilai gizi dengan cara memadankan jenis pangan dengan jenis pangan yang sama atau serupa dari sumber literature/rujukan lain, kemudian nilai gizi dihitung berdasarkan berat kering/solid. Pada Tabel Komposisi Pangan ini, *imputated values* diberi warna **biru muda**.
- c. *Borrowed value* adalah nilai gizi dengan cara memadankan jenis pangan yang sama atau serupa dari sumber literature/ rujukan berupa Table Komposisi Pangan negara lain, kemudian nilai gizi dihitung berdasarkan berat kering/solid. Pada Tabel Komposisi Pangan ini, *borrowed values* diberi warna **biru muda**.
- d. *Presumed value* merupakan data berdasarkan hasil asumsi. Misalnya pada daging tidak mengandung serat, maka diasumsikan nilai serat pada daging adalah "0" tanpa memerlukan analisis laboratorium untuk serat daging.

Imputated dan *borrowed values* ada pada beberapa pangan tunggal mentah dan yang mengalami proses pemasakan sederhana, seperti bakar dan rebus, tanpa mempertimbangkan adanya penambahan garam dan bumbu yang dapat mempengaruhi kandungan natrium pada bahan pangan tersebut. Nilai gizi yang tidak dilakukan imputasi adalah vitamin C, karena analisis vitamin C pada TKPI masih menggunakan metode titrasi yang seharusnya diperbarui dengan metode analisis HPLC. Nilai gizi serat juga tidak dilakukan imputasi karena pada TKPI (2009) nilai serat yang tercantum bervariasi yaitu ada nilai serat kasar dan ada serat makanan. Nilai gizi Retinol dan Karoten Total, juga tidak dilakukan imputasi.

Imputasi nilai Besi dan Seng, pada beberapa bahan pangan menggunakan rujukan hasil penelitian dari BATAN. Nilai gizi seng tepung terigu pada TKPI ini, telah disesuaikan terhadap fortifikasi seng pada tepung terigu (SNI 01-3751-2006). Namun untuk bahan makanan yang mengandung atau menggunakan tepung terigu, nilai gizi seng belum mengalami penyesuaian.

Sistematika penentuan *imputated* dan *borrowed value* dapat dilihat pada "Pedoman Imputasi Nilai Gizi Tabel Komposisi Pangan Indonesia (tahun 2017)". Sumber rujukan yang digunakan untuk imputasi nilai gizi adalah:

2.7. Berat bahan yang Dapat Dimakan (BDD)

Kadar zat gizi disajikan per-100 g bagian yang dapat dimakan (*edible portion*). Contoh, kandungan protein ikan layang adalah 20 g/100 g berat ikan yang dapat dimakan. Berat ikan layang yang dapat dimakan adalah sebesar 80%, berarti dari 100 g ikan layang, yang dapat dimakan hanya sebesar 80 g, yaitu daging ikannya, tidak termasuk tulang, duri/sirip, kepala, dan ekor. Dengan demikian untuk mendapatkan 100 g berat ikan layang yang dapat dimakan, maka diperlukan ikan layang sebesar $(100 \times 100) : 80 = 125$ g

Dengan melihat data BDD dapat diketahui, bahwa bahan pangan dapat dimakan seluruhnya atau hanya sebagian. Contoh, bila BDD buah sebesar 100%, berarti buah tersebut dimakan bersama kulitnya bahkan mungkin juga dengan bijinya.

Pada TKPI ini sebagian besar pangan sudah memiliki data BDD, yang diperoleh dengan cara menelusuri sumber asli komposisi bahan pangan yang bersangkutan. Hanya sebagian kecil BDD bahan pangan yang tidak dapat ditelusuri, sehingga harus meminjam data BDD bahan pangan yang sama dari *Food Database* negara di ASEAN. Namun, masih ada beberapa kendala dalam penentuan BDD, sehingga ada beberapa bahan pangan pada TKPI ini, yang belum memiliki data BDD.

2.8. Sumber Rujukan Bahan Pangan dan Nilai Gizi

Pada TKPI ini, dalam penulisannya memiliki kolom SUMBER, yang mencantumkan sumber rujukan bahan pangan beserta nilai gizinya.

2.9. Penjelasan Makanan Lokal/Daerah

Penjelasan makanan local/daerah dicantumkan pada bagian glosari. Penjelasan yang diberikan adalah mengenai beberapa pangan komposit (masakan dan kue) atau pangan lokal lainnya. penjelasan yang diberikan berupa nama lokal dan komposisi bahan pangan pembentuk makanan tersebut atau proses pengolahannya. Beberapa penjelasan yang diberikan diperoleh dengan penelusuran melalui *webbase*.

2.10. Angka dan Tanda pada Daftar

Tanda 0 berarti pangan tidak mengandung zat gizi itu atau sangat sedikit (*trace*) sehingga tidak terditeksi saat analisis dilakukan. Sedangkan bila kolom nilai gizi kosong, berarti zat gizi pangan tersebut tidak dianalisa atau tidak memiliki data nilai gizi.
